

## SQL Chapter 2 FSN

SQL - Structured Query Language.

- It is a language to talk to 'database' (access)

- is language

SQL server -

is a database

To work on SQL,  
a DB software  
is required.

SQL is not case-sensitive

But 'string data' - 'single quote' → case sensitive

- select \* from tab: list of all tables  
- desc table\_name: → Describe  
- select \* from table\_name:

column names  
constraints  
datatype

where clause

- is used to restrict no. of records displayed.  
- it gives only records of the specified condition.  
- filter ungrouped data.  
- different from having clause
